

100% Micronised Natural Gypsum Dihydrate

Ideal for use on all sports turf surfaces requiring gypsum

SOILFORM GYPSUM is a highly soluble micronised natural gypsum dihydrate for amending soil profiles and correcting nutrient deficiencies.

The readily available calcium is delivered in a standard size granular formulation that breaks down rapidly following irrigation for even particle distribution and premium soil conditioning.

For turf renovation and high cut sports turf areas, apply at a rate of 2Kg - 10Kg/100m².

Use of lower rates are recommended when applying as part of a regular maintenance program.

Higher rates can be used during renovation.

Irrigate after application to dissolve the granules and to ensure even product distribution through the soil.

- ✓ Corrects calcium levels
- ✓ Addresses soil deficiencies
- ✓ Manages sodium accumulation
- ✓ Rapidly dissolves

Contact your GTS Technical Field Agent for more application information.

SOILFORM GYPSUM

Typical analysis (w/w)

Calcium (Ca) as Sulphate Total %	23.00
Sulphur (S) as Sulphate - Total %	16.00
APPLICATION RATES	
Renovation	Up to 10Kg/100m ² (1000Kg/ha)
Maintenance	2Kg-5Kg/100m ² (200Kg-500Kg/ha)
AVAILABLE PACK SIZES	25 kg, 1000 kg
