

# Hybrid Green Couch

Standard Soil Analysis (Mehlich III Extraction)

Performed by **The NINEMIRE GROUP**

## Soil Nutrient Status

**5.3**

Total Exchange Capacity

**0.8%**

Organic Matter (humus)

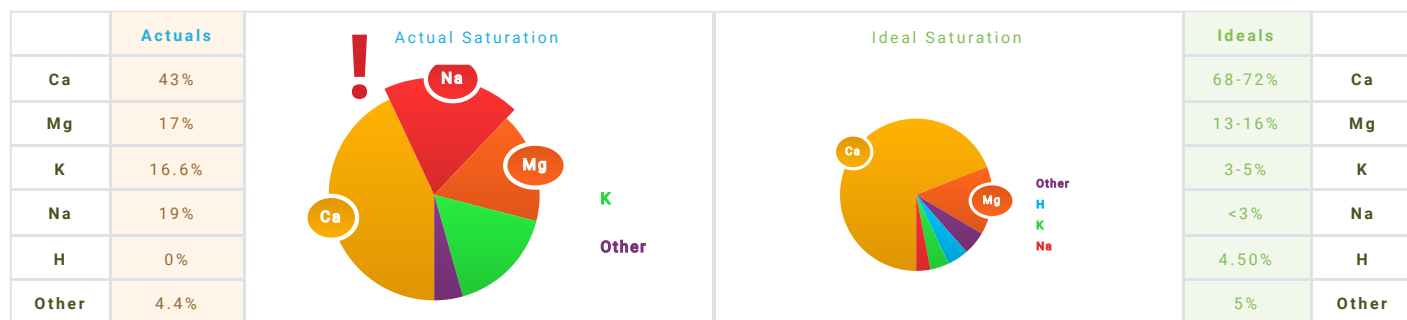

**8.1**

pH (H<sub>2</sub>O 1:5)

**0.20**

Conductivity (mmhos/cm)

## Base Saturation: Key Elements

Kg per Ha of Calcium deficient	956
Kg per Ha of Magnesium deficient	31
Kg per Ha of Potassium deficient	0
Kg per Ha of Phosphorus deficient	0

Apply a total of **45.00** Kg per 100m<sup>2</sup> of Granular Gypsum over an appropriate number of applications

Apply a total of **2.00** Kg per 100m<sup>2</sup> of Kieserite over an appropriate number of applications

These numbers are to correct soil deficiencies only. Nutrient losses such as leaching or plant uptake should be considered when formulating maintenance programs. TX Trace may be required to increase levels of iron, manganese, or both. Additional calcium amendments may be required to offset detrimental sodium levels.
